Environment

We believe that promoting and maintaining environmental awareness and respect for natural resources in all aspects of our business is fundamental to our success. We are committed to introducing innovations to continuously improve our environmental performance, meeting national and international standards, and, where possible, to go beyond established best practice and make a positive impact by leaving our projects in better condition and with stronger natural systems than when we arrived. We aim to achieve:

- Zero waste from our mine and processing facilities;
- 100% mitigation of ecosystems and natural habitats;
- Introduction of zero-pollution technologies.
